

# Cool Borders Challenge

## Objective

Create a set of cards demonstrating various CSS border techniques including gradients, animations, shapes, and image borders.

## Instructions

### 1. Setup Your Document

- Create an HTML file with the standard structure: `DOCTYPE`, `html`, `head`, and `body`.

### 2. Styling

- Inside the `head`, add a `style` tag for CSS.
- Style the `body` to center the content and set a background color.
- Define a `.container` class for a flex container and a `.card` class for individual cards.

### 3. Create Cards

- In the `body`, add a div with the class `container`.
- Inside this, add divs with the class `card`, each with a unique ID: `gradient-border`, `animated-border`, `shape-border`, and `marching-ants-border`.

### 4. Apply Border Styles

- For `gradient-border`, apply a linear gradient as the border.
- For `animated-border`, use dashed borders with a rotating animation.
- For `shape-border`, create a card with a clip-path shape.
- For `marching-ants-border`, Create a border that mimics the "marching ants" animation effect
