CSS Dog Creation Exercise

Your mission is to use CSS to bring a friendly cartoon dog to life. Focus on positioning to assemble the dog using different HTML elements.

Setup:

- Begin with a main container for the dog.
- Inside, create elements for the dog's ears, head, eyes, nose, body, and tail.

Steps:

1. Give the dog's body a specific shape and color.
2. Create two ears and position them on the top sides of the head. Think about how to rotate them to look like dog ears.
3. The head should be a circle placed on top of the body.
4. Add two eyes and a nose to the head. Consider how you can use `border-radius` to make them round.
5. Position the tail and add an animation to make it wag.

Points to Ponder:

- How can `position: absolute;` and `position: relative;` help you place the elements?
- What `transform` values will tilt the ears and wag the tail?
- Where should you place the eyes and nose for a friendly face?

Extra Challenges:

- Animate the eyes to make the dog blink or look around.
- Change the dog's colors on hover for an interactive effect.
